Professional Profile

Member of the Arcos Dorados Engineering team, focused on designing and operating on-premises and multicloud infrastructure. I develop internal platforms and automate processes using DevOps practices to improve reliability and operational efficiency. Currently studying Computer Engineering at UADE.

Professional Experience

Arcos Dorados | Cloud Engineer — July 2024 - Present

- **Internal infrastructure platform.** Develop and maintain the corporate platform that centralizes all deployments and infrastructure management. Built with Python, AWS Lambda and DynamoDB, with an event-driven architecture integrated with Azure Pipelines (Azure DevOps), it automates deployments, provides traceability, applies compliance controls and consolidates cost and usage data.
- **Observability and automated remediation platform.** Contribute to the development of a Python platform with AWS Lambda, AWS Step Functions and Amazon Connect, integrated with Zabbix. It centralizes metrics and incidents from servers, network links and IT infrastructure, analyzes events, automates remediation and escalates other cases to the responsible team for faster response.
- **Base images.** Automated the creation and distribution of golden images across the organization with Packer, and operating system configuration with Ansible to meet compliance standards.
- **Corporate website modernization.** Migrated corporate websites from Amazon EC2 instances in Auto Scaling Groups to containerized deployments on Amazon ECS.
- **Cloud architectures and IaC.** Design, deploy and operate scalable cloud, on-premises and hybrid architectures with high availability across AWS, Azure, OCI and VMware vCenter. Automate provisioning through infrastructure as code (IaC) using Terraform, CloudFormation and AWS CDK.
- **Regional operations, security and costs.** Work with teams across Latin America and the Caribbean on IAM/RBAC, networking, security, corporate compliance and cloud cost optimization.

UTN Buenos Aires | Systems Administrator — April 2023 - June 2024

- **OpenNebula and high availability.** Implemented and administered virtualization clusters with high availability for both campuses. Upgraded the platform and added nodes to expand capacity while keeping academic and administrative systems operational.
- **Hybrid architectures and data centers.** Operated servers, storage, UPS systems, networks and pfSense at both campuses, connecting the data centers to the ARSAT cloud through IPsec VPNs. Managed device security and automated infrastructure tasks with SaltStack and Ansible.
- **Containers and CI/CD.** Contributed to the migration of monolithic applications to containerized architectures based on microservices. Deployed Docker Swarm with high availability across both data centers, using Harbor and Traefik; automated deployments with Jenkins and GitLab CI/CD.
- **Kubernetes for testing.** Implemented a Kubernetes cluster with high availability using kubeadm across both campuses to test deployments and evaluate application behavior.
- **Observability and automated remediation.** Implemented monitoring, alerts and automated remediation for servers, containers, networks, UPS systems and critical services with Prometheus, Grafana, InfluxDB and Telegraf. Centralized logs with Loki for review without direct server access.

UTN Buenos Aires | IT Support Analyst April 2021 - March 2023

- **Support and operational continuity.** Resolved hardware, software and connectivity incidents; administered Active Directory accounts, groups and Group Policy Objects (GPOs).
- **Device deployment and management.** Standardized Windows images and performed bulk network cloning with Clonezilla. Administered the centralized Kaspersky solution for endpoint management.
- **Documentation and inventory.** Maintained IT asset records in NetBox and GLPI and documented procedures for day-to-day IT operations.

Casa Salesiana Pío IX | Technical Support Intern July 2018 - December 2018

Supported users and maintained computers and network infrastructure in an educational setting.

Personal Project

Infrastructure homelab. I use my homelab to learn and experiment with technologies, running a Proxmox VE cluster with high availability, VLAN networks and k3s. I automate deployments with Terraform and Ansible, build base images with Packer and run inference tests with local LLMs.

Technical Skills

Cloud platforms. AWS, Azure, Oracle Cloud Infrastructure (OCI), Google Cloud and Cloudflare.

Containers. Docker, Docker Swarm, Kubernetes, Amazon ECS, EKS, AKS, GKE and ACI.

IaC and automation. Terraform, Terragrunt, CloudFormation, AWS CDK, Packer, Ansible and SaltStack.

CI/CD. Git, Jenkins, GitLab CI/CD, GitHub Actions, Azure Pipelines, AWS CodeBuild and CodePipeline.

Observability. Prometheus, Grafana, Loki, ELK Stack, InfluxDB, Telegraf and Zabbix.

Networking and security. VLAN, DNS, VPN/IPsec, IAM/RBAC, pfSense and AWS CloudTrail.

Databases. PostgreSQL, MySQL, MariaDB, SQL Server, Oracle DB, Redis, MongoDB and DynamoDB.

Operating systems and virtualization. Linux (Debian, Ubuntu, CentOS, RHEL, SLES, Amazon Linux, Alpine, Fedora, Oracle Linux), FreeBSD, Windows Server; VMware, Proxmox VE, Hyper-V and OpenNebula.

Web and load balancing. Nginx, Apache, IIS, Traefik, HAProxy and WordPress.

Programming and scripting. Python, Java, Bash and PowerShell.

Education

UADE. Computer Engineering, degree in progress (2025 - Present).

Casa Salesiana Pío IX. Technical High School Diploma in Electronics (2013 - 2018).

Certifications and Training

Google Cloud. Associate Cloud Engineer (ACE, September 2026).

UTN Buenos Aires. Diploma courses: Python (2022), Django Framework (2023), Full Stack Web Development (React JS, 2024). Advanced Data Networking (2022); Ethical Hacking certificate (2023).

Red Hat. System Administration I (RH124, 2026).

Languages

Spanish. Native. | English: advanced written; intermediate spoken.
